

VikingGenetics at the AgroNord Show 2009

VikingGenetics is represented at the **AgroNord Show** on **March 4, 2009**. We will offer you refreshments at our stand where you also will meet our breeding advisors and we will inform you of our fine offers. At present we experience great interest in our new **GenVikPLUS®** bulls that improve the breeding progress significantly – especially regarding important traits such as fertility, reproduction, health and functional traits.

VikingGenetics shows two daughter groups after current Holstein proven sires at the AgroNord exhibition:

D Sammy is one of the most wanted bulls in the daily service plan. NTM +33 and sky-high concerning feet & legs, mammary and health. During a long period of time there has been high demand on D Sammy domestically as well as from abroad, and therefore we are not able to meet all orders.

During the latest year Sammy has been the second most used bull in Denmark and Sweden – and at the same time the most popular sire of sons.

V GroovyBL has NTM +28 and now with more than 3,000 milking daughters proves that he breeds that kind of cows wanted by the milk producers. V GroovyBL is one of the absolutely best son of Jocko Besn and therefore still one of the most used bulls in the daily service plan. VikingGenetics initiates 15-20 sons after this very stabile bull.

At the AgroNord there will be a large exhibition of Holstein, jersey, Red Holstein and some Danish Red elite cows. Many of the elite cows are daughters after Viking bulls.

We look forward to seeing you at AgroNord 2009!
